

DECISION MAKING SYSTEM PROCESS MANAGEMENT SUITES

Omni Global Technologies

SUMMARY

As part of the process of simulating various analyses in military decision-making procedures, this information system is capable of simulating both movement simulations and battle simulations within the two-dimensional space (on a map). Additionally, this system provides a way to visualize three-dimensional training scenarios per day, so that the visual results obtained are more realistic and easier to interpret.

As well as simulating movement and battles in 2D dimensions (on maps), this information system can also simulate various analyses in military decision-making procedures. Furthermore, the system is capable of displaying 3-Dimensional training scenarios per day in order to provide users with more realistic and easier to evaluate visuals as a result of the use of the system.

FEATURES / FUNCTION

Simulation of various analyses during the decision-making process in the military

Ensure that movement simulation and battle simulation is done in two dimensions (on the map), to ensure that necessary product corrections can be made if necessary

In order to facilitate the process of military decision-making procedures, we visualize three dimensional scenarios every day

Coordinate activities between teams in order to achieve joint goals
